

HIGHWAYS

SAM has decades of proven experience keeping highway programs of all sizes on schedule, on budget, and in compliance with local, state and federal requirements. Our Managed Geospatial Services™ framework equips clients such as municipalities and DOTs with the most accurate site data—fast. And our infrastructure services provide the necessary management oversight for inspection and testing acceptance so that all trades are working toward the same program goals, thus reducing client risk.

From local detours to multibillion-dollar roadway infrastructure programs, SAM has the field experience to cover every contingency. We're more than a service provider—we're a trusted partner in your program delivery.

sam.biz

A complete suite of services

SAM's turnkey infrastructure service teams deliver the talent and technology to overcome even the most daunting highway programs. From initial surveys, to utility locates to engineering and inspection, we have you covered every mile of the way.

What's more, our nationwide coverage provides continuity across service locations—while our local management teams prioritize relationships with community partners to satisfy program stakeholders.

Proven experience that speaks for itself

SAM's experienced program managers can support roadway infrastructure programs of any size, anywhere. Our team also includes licensed engineers, geomatics experts, and professionals certified to Transportation Worker Identification Credential and American Concrete Institute Standards. We're active members of the American Society of Highway Engineers as well as the CMAA.

Our technology is a game-changer

SAM works upfront with stakeholders to identify a program's unique needs, creating customized software solutions for a unified vision. We then bring this to fruition with the help of the industry's most sophisticated geomatics technologies and infrastructure software. Whether we're using augmented reality to eliminate conflicts in the field, deploying 3D planning solutions that meet evolving DOT requirements, or applying the latest mapping technology to capture the smallest details with unprecedented clarity, SAM is invested in your program's success. Our infrastructure-phase technologies provide our inspection and testing teams the ability to quickly capture and track installed items of work with client-focused metric reporting features.

We have a reputation for producing easy-to-use deliverables. Our cloud portal provides a single, dependable platform from which all engineering and infrastructure partners can work, while still providing the ability to upload into various client systems. This allows our team to integrate seamlessly into the client's workflow.

SAM Core Services

Aerial Mapping / Geomatics / GIS / BIM
Utility Engineering / Engineering Inspection
